For the e-version of the CAPS Annual Report 2021 visit: [https://caps.org/who-we-are/annual-reports](https://caps.org/who-we-are/annual-reports)
Established in 2013, the Centre for Asian Philanthropy and Society (CAPS) is committed to improving the quantity and quality of philanthropic giving throughout Asia.

Our mission is to improve the social investment sector in Asia by identifying and disseminating best practices, models, policies and strategies that can contribute to positive system change.

WE DO THIS THROUGH:

Policy Research
Helping business leaders, philanthropists and policymakers see how they can facilitate and increase private capital flows toward the social sector

Applied Research
Providing useful insights and tools through qualitative and quantitative research to drive more impactful investment toward meeting social needs

Commissioned Research
Advising corporations and foundations on how to achieve their giving goals through strategic review, project design and evaluation that lead to improved social investment strategies and corporate social responsibility programs

Convening
Curating invitation-only events dedicated to our network of philanthropists, and connecting our partners through meetings and workshops to foster a learning community and support capacity building
Dear Friends,

As we enter our third year of the pandemic, Asia and the rest of the world are adjusting and recalibrating. As I write, efforts continue to vaccinate the global population, a herculean task requiring an unprecedented level of cooperation between governments, medical professionals and populations. This, I think, has been one of the true victories to come out of these challenging times: collaboration has blossomed, innovation has abounded, and communities of practice are emerging for how best to move forward in a permanently altered world.

The social sector, including philanthropy, nonprofits and social enterprises, has heeded the call from communities in need. Businesses, too, have responded through increased commitment to supporting social causes.

CAPS continues to track the trends and developments of Asia’s social sector, working closely with our partners throughout the region to uncover the successful strategies for doing good during the pandemic. Mid-2021 saw the release of our report on public-private partnerships (PPPs) for social good. While PPPs have commonly been thought of as vehicles for driving infrastructure projects, we are now seeing increasing numbers of private companies and foundations working with government to address social challenges in areas such as education, health and community development. This structure leverages the individual strengths of government and the private sector, creating synergies that can deliver impact at scale. Our report delves into the development of PPPs for social good and how Asia is fertile ground for their continued implementation.

In 2022, CAPS will release the third edition of our flagship study, the Doing Good Index. With each iteration of this research, we are developing a longitudinal snapshot of how regulations, tax settings, ecosystems and other factors shape the flow of private resources for doing good. The ongoing success of this project is testament not only to the hard work of the CAPS team but also to the strong relationships we have with our partner organizations across Asia. It is my privilege to be a part of this network of organizations, foundations, businesses and individuals dedicated to improving the lives of the billions who call Asia home.

Ronnie C. Chan
Co-Founder and Chairman
In 2021, together with our 23 partners across the region, CAPS carried out the data collection needed to produce the Doing Good Index 2022, the third iteration of our biennial study analyzing the factors that enable or impede the flow of private resources toward doing good. Early in the year, we met virtually to discuss our collaborative efforts and hear from each other about how the pandemic was affecting our organizations, communities and countries. It was clear that many of the hardships we experienced were being shared throughout Asia. Thanks to the contribution of these partners, our research team collected over 2,200 surveys and held expert meetings in 17 Asian economies. In addition to the four sub-indexes of Regulations, Tax and Fiscal Policies, Procurement and Ecosystem, the Doing Good Index 2022 will include information on the impact of the pandemic. We look forward to presenting the final report in mid-2022.

In June 2021, CAPS released our report on public-private partnerships (PPPs) for social good. We analyzed trends and strategies across Asia that make PPPs for social good more impactful, providing examples from 11 economies. As always, our mission is to shine a light on the ways in which private capital can best be mobilized to address social issues. When surveying our network of ultra-high-net-worth individuals, 88% reported their belief that the number of PPPs aimed at solving a community challenge would increase.

Throughout 2021, we have been working on an in-depth study of philanthropy in China. For this study, we downloaded over 5,600 foundation annual reports with more than 50,000 project details, analyzed media coverage, and interviewed scores of philanthropists and foundation staff. The study is divided into four reports, focusing on philanthropy for health, environment, education and poverty alleviation. In November 2021, we released the first study on health philanthropy, with the second on environmental philanthropy published in February. The remaining two will be completed in 2022.

In 2021, we began to work on a new project, Building Back Greener: Environmental Philanthropy in Asia. The goal of this study is to look across the region to see what corporates and private foundations are doing to address environmental degradation and climate change, be it through business operations, corporate social responsibility programs or philanthropy. The published report will spotlight examples of successful environmental initiatives across Asia and provide actionable insights to philanthropists, foundations and companies seeking to enhance their philanthropic and investment portfolios in the environment.

Throughout the year, CAPS held a number of online events for our network of philanthropists and business leaders throughout Asia. Keynote speakers included Bill Gates, Ray Dalio, Indonesia’s Minister of Education, Culture, Research and Technology Nadiem Makarim, and Fareed Zakaria. These events create opportunities for Asian philanthropists to interact with global thought leaders in our sector as well as with each other.

No organization is an island. CAPS is proud to work with a network of partners, supporters and colleagues of the highest caliber. The members of our network are our ears to the ground throughout Asia, allowing us to present informed and insightful research on a wide and varied region. We have been particularly impressed at the ways in which our community has responded to the ongoing reality of the pandemic, working within their local context to address challenges and have a lasting impact.

Finally, I would like to thank our generous donors—listed at the end of this report—who enable CAPS to do what we do. We continue to be humbled and motivated by your support. After a year of changes, CAPS enters 2022 with a strengthened team, a fresh approach and renewed determination.

Dr. Ruth A. Shapiro
Co-Founder and Chief Executive

CAPS has worked hard in the last year to continue generating and delivering insights despite the challenges presented by the prolonged pandemic. Fortunately, we have been able to carry out our work by moving online.
Doing Good Index

2021 was the planning and research year for the third iteration of the Doing Good Index, which will be published in mid-2022. Our flagship policy study is designed to identify broad trends in the social sector, including the factors that enable or impede private social investments across 18 economies in Asia. The index maps the environment for social investment by considering factors under four sub-indexes: Regulations, Tax and Fiscal policy, Ecosystem and Procurement. These sub-indexes provide understanding of the specific measures that economies have taken to catalyze philanthropic giving and promote the development of the social sector. In addition to looking at these sub-indexes, the 2022 edition will examine the impact of Covid-19 and how all segments of our society have responded and continue to respond.

In January 2021, we convened our 23 partners across the region virtually to kick off the study and develop the key themes we wanted to explore. Based on our partners’ input, our research team carefully designed the survey, and with our partners’ help, an impressive 2,239 survey responses were collected and 126 experts interviewed. Our findings showcase the hardship felt due to the pandemic, the response of government, companies and the social sector, and the resilience of communities around the region.

Public-Private Partnerships for Social Good

With a growing trend in Asia of governments and the private sector coming together to address social needs, our public-private partnerships (PPPs) report analyzes trends and strategies across Asia that make PPPs for social good more impactful. The CAPS team conducted 50 in-depth interviews and analyzed 20 notable PPP examples from 11 Asian economies to set out six key strategies that enable PPPs for social good not only to achieve greater impact but also to prepare for sustainability and navigate risks. The report showcases why this trend is taking root, what best-in-class PPPs for social good look like, and how they can best maximize impact.

PPPs for social good are a win-win-win

**GOVERNMENT**
- Improved reach and quality of services
- Enhanced state capacity
- Access to private sector expertise and technology

**COMPANIES**
- Enhanced social capital with government
- Enhanced social capital with communities
- Opportunity to innovate
- Expanded customer base

**COMMUNITY**
- Greater access to social services
- Improved development outcomes
- Enhanced local capacity
- Contextual solutions

*Based on CAPS surveys of ultra-high-net-worth business leaders from 10 Asian economies in 2019 and 2020.

As part of the report dissemination, CAPS, with co-organizer Thai Beverage/Case ASEAN, curated a virtual forum, *Empowering Partnership for Sustainability*. We introduced our PPP report and generated insights with top corporate chief executive officers and leaders of social delivery organizations across Asia, sharing with them how multi-sector partnerships are helping to create greater economic, environmental and social impact.
China Issue Guide Series (ongoing)
Our China Issue Guide Series project released its initial report in November, the first in the four-part series. The health philanthropy report looks at the role of individual and corporate philanthropy, examining the idiosyncrasies of Chinese giving and the role that philanthropy can play in bridging the gap between demand and supply of health care services in China.

Understanding Chinese philanthropy at the project level was a tremendous undertaking: we created our own extensive data base by mining over 5,600 annual reports of foundations in China with more than 50,000 project details. In addition, we conducted 40 interviews and analyzed media resources in order to carry out a granular analysis of how philanthropy is deployed in China in four areas: health, environment, education and poverty alleviation.

The first report closely studied health care funding in China, the areas of most urgent need of attention, and spotlights case studies of successful health care philanthropy. We found that Chinese philanthropy has unique characteristics:

- Supports government initiatives by supplementing existing programs and filling gaps in unmet needs
- Tends to utilize business skills, experience and outcomes to put in place effective, efficient and sustainable programs
- Fosters innovation to better address an existing problem
- Focuses on connection to one’s ancestral home for tradition and pragmatism
- Often remedial rather than preventive, but preventive care is gradually receiving more attention

CAPS presented the findings from this report at a hybrid event co-hosted by UBS in November 2021, held simultaneously onsite in Hong Kong and virtually in mainland China.
**Building Back Greener: Environmental Philanthropy in Asia (ongoing)**
CAPS’ ongoing research project on environmental philanthropy in Asia looks at how companies, foundations and philanthropists are using their resources to address environmental challenges in the region. Philanthropy, both individual and corporate, can play an important role in financing environmental actions as well as piloting new innovations needed to address this existential challenge. Unfortunately, to date, environmental issues have lagged funding priorities such as education and health.

We know from our experience that environmental philanthropy—which can include corporate social responsibility activities and investments in sustainability that benefit the community and business—does exist, yet little information is available about what is happening in this space across Asia. Our premise is that there is desire by philanthropists and corporates to be more engaged on the issue. Our research will address this knowledge gap by identifying and mapping the current trends and approaches to addressing environmental degradation and climate change across the region.

Once published, our report will provide actionable insights to philanthropists, foundations and companies seeking to deepen engagement in addressing environmental and climate change challenges in Asia.

**DECODED: Blended Finance in Action in Asia**
Our DECODED series unpacks, explains and crystallizes issues critical for social investment in Asia. It draws upon our expertise in research and access to an extensive network of sector experts and philanthropists in 18 Asian economies, which enables us to identify emerging trends in the region. Through DECODED, we translate these concepts into digestible insights.

Our report on blended finance looks closer at how this model is being used in the region to attract funding for projects that address social and environmental issues. The report showcases blended finance initiatives from around the region. It shows how blended finance can be a win-win strategy to pool private and public capital and bridge a yawning funding gap in meeting the Sustainable Development Goals and in the wake of Covid-19.

CAPS continues to work in an advisory capacity with philanthropists, foundations, family offices and social delivery organizations. In 2021, we delivered a commissioned study on the impact of operational funding for nonprofit organizations in Hong Kong in the midst of the pandemic and conducted several strategic reviews for corporate and family foundations in Asia.

In India, we have been working with our knowledge partner Centre for Asian Philanthropy India (CAPI) on a case study, tool kit and film of an innovative multi-specialty pediatric hospital in Mumbai. The goal of this project is to provide a useful roadmap and set of tools for philanthropists in India to carry out similar projects elsewhere in the country.
CAPS curates invitation-only conferences and events for philanthropists and business leaders from Asia and around the world. In 2021, due to the pandemic, most of these events continued to be virtual.

In June, our network convened to listen to Dr. Brian Kennedy, head of the National University of Singapore’s Centre for Healthy Aging Lab, in conversation with Dr. Swati Piramal, vice-chairperson of the Piramal Group. In November, Paul Polman, the ex-chief executive officer of Unilever and co-author of Net Positive: How Courageous Companies Thrive by Giving More Than They Take, shared his views on how companies can become “net positive” and contribute productively to our communities and our planet.
Over the course of 2021, CAPS’ research and views were covered by a number of media outlets in Asia and beyond.

With our donors’ and partners’ ongoing support, CAPS carries on with our mission and continues to generate and deliver insights during the pandemic.

2022 started with the launch of the blended finance report in the DECODED series, highlighting the catalytic ways to pool private and public capital and bridge a funding gap in the wake of Covid-19 in Asia.

We released the second report of our China Issue Guide Series in late February focusing on environmental philanthropy. In partnership with the China Development Research Foundation, we launched two of the issue guides with 243,000 online viewers tuning in from China. The remaining two guides on education and poverty alleviation will be completed in mid-2022.

In India, where significant social and philanthropic work is providing a dynamic ground for research and knowledge sharing, CAPS is forging new ties to help us to provide more in-depth research in the region. Together with our strategic partner Centre for Asian Philanthropy India (CAPI), we look forward to finalizing our work on the topics of health (hospitals) and environment (water) to develop tools that can be scalable across India.
The Centre for Asian Philanthropy and Society is a registered charity in Hong Kong under Section 88 of the Inland Revenue Ordinance. Funded by a group of forward-thinking philanthropic individuals and companies, CAPS is a true pan-Asian collaborative endeavor. Our supporters recognize that research into effective strategies and models benefit the community at large and allow private social investment to make real differences in the lives of the people and communities in our region. We are grateful for the continuing support of the following individuals and organizations who make our work possible.

CAPS accomplishes much of its work in conjunction with inspirational partners from across Asia. Our network includes universities, associations, nonprofit organizations, foundations, and other like-minded groups that are doing significant work to build a vibrant pan-Asian learning community. We are grateful to the following organizations for being valuable partners in our work.
